

Ear Infections

Folder: TRUERIFE FREQUENCIES Program: EAR INFECTION Sessions: 1-3

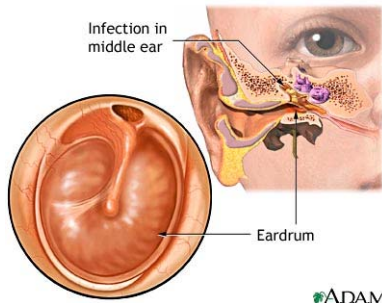

Report from a Researcher: Recently my wife spent some time with a friend of hers who complained of a 1 week ear infection and no health insurance. With limited resources my wife invited her in. Ear infections can be the most difficult to clear. So in this case we tried a 3 pronged approach.

These are the protocols we used. Those who have purchased a TrueRife Platinum systems or additional interfaces can use this approach.

Step one Ozonate water: One glass chilled ozonated water, with one ounce of ionized silver sprayed under the tongue and 10 metered sprays into the ear canal. Next we took the stone off the ozonator and had her hold in to her ear for 6 minutes.

Finally we ran the ear infection program with bulb placed in radiant mode for 52 minutes.

She reported that her ear was draining and the pressure was relieved by the end of the session.

We sent her home with 1 ounce of ionized silver to spray in her ear for the next few days to make sure the infection is cleared.

The Rife Program:

#52 minutes

#Acute otitis media is an infection that produces pus, fluid, and inflammation within the middle ear. Older children will often complain about ear pain, ear fullness, or hearing loss. Younger children may demonstrate irritability, fussiness, or difficulty in sleeping, feeding, or hearing. Fever may be present in a child of any age.

#These symptoms are frequently associated with signs of upper respiratory infection, such as a runny or stuffy nose or a cough. Severe ear infections may cause the eardrum to rupture. The pus will then start to drain out of the middle ear and into the ear canal. The hole in the eardrum from the rupture usually heals after medical treatment.

#In children, the eustachian tube is shorter and less slanted than in adults and allows bacteria and viruses to find their way into the middle ear more easily. This results in acute otitis media, with a buildup of pus within the middle ear. The pressure and inflammation result in pain and the inability of the eardrum to vibrate. During the infection there will usually be some temporary hearing loss.

#otitis external(outer ear infection)

5 drops hydrogen Peroxide in each ear for 2 weeks.

Epstein-Barre Virus (EBV)

Folder: TRUERIFE FREQUENICES Program: EPSTEIN BARR Sessions: 1-7

Bulb Program

#49 minutes

#Epstein-Barre virus, frequently referred to as EBV, is a member of the herpes virus family and one of the most common human viruses. The virus occurs worldwide, and most people become infected with EBV sometime during their lives. In the United States, as many as 95% of adults between 35 and 40 years of age have been infected.

Infants become susceptible to EBV as soon as maternal antibody protection (present at birth) disappears. Many children become infected with EBV, and these infections usually cause no symptoms or are indistinguishable from the other mild, brief illnesses of childhood. In the United States and in other developed countries, many persons are not infected with EBV in their childhood years. When infection with EBV occurs during adolescence or young adulthood, it causes infectious mononucleosis 35% to 50% of the time.

#The clinical diagnosis of infectious mononucleosis (EBV) is suggested on the basis of the symptoms of fever, sore throat, swollen lymph glands, and the age of the patient. Usually, laboratory tests are needed for confirmation. Serologic results for persons with infectious mononucleosis include an elevated white blood cell count, an increased percentage of certain atypical white blood cells, and a positive reaction to a "mono spot" test.

#There is no specific treatment for infectious mononucleosis, other than treating the symptoms. No antiviral drugs or vaccines are available. Some physicians have prescribed a 5-day course of steroids to control the swelling of the throat and tonsils. The use of steroids has also been reported to decrease the overall length and severity of illness, but these reports have not been published.

I still need to use the EBV (Epstein-Barre Virus) program most every day. I use either the 17min. or the 30 min., so it's not bad. The doctor told me that the EBV imbeds itself in our DNA, so you can't get rid of it. So I'm sure glad I've got something to fight it!

Dust Mites

**Folder: ION PRO WAVE Program: IMMUNE SYSTEM STABILIZATION
Sessions: 1-4**

We have been working with clients who will develop a chronic cough that seems to linger after contracting a cold or flu virus. Oftentimes the problem is dust mites or an allergy.

It is important to replace pillows that have been in use for 5 years or longer as some researchers say that over 50% of the pillows weight is dust mite carcasses, fecal matter as well as living dust mites themselves.

No matter how long you Rife or use other protocols to end a chronic cough, if dust mites are the problem burying your head in a pillow full of them each night as you sleep is counterproductive.

If you suspect this is your problem, try changing out your pillows as a starting point. You can also run the following program after you clear the source to help stabilize your immune system. It is in the TrueRife Ion Pro Wave folder under **Immune System Stabilization**.

stabilize Immune system

#Resonant therapy to assist in immune system stabilization. Excellent to address a host of immunological conditions. Arthritis, Poison Ivy, Allergies, Lupus, MS, etc.

Emphysema

**Folder: TRUERIFE FREQUENCIES Program: EMPHYSEMA Sessions: 1-3
months once a day to evaluate results.**

Question: Have you, or do you know of anyone, that has any experience with the emphysema program? We have an older sister that has been told she has 6 months to live because of her emphysema, (I do wish Drs. would not do that) She is on oxygen. she used to smoke but hasn't in over 35 years. I have not mentioned it to her because I don't want to get her hopes up. so I need some guide lines here.

Emphysema can be halted and sometimes reversed. The MSM protocols along with co-enzyme Q-10 should be implemented. Lung repair may not be noticeable for 6 months running the program with these protocols.

#33 minutes

#Emphysema is a general term that refers to air-filled expansions in tissues. However, it is most commonly used to refer to a type of chronic obstructive lung disease characterized by shortness of breath and usually caused by chronic tobacco smoking. Its hallmark is accumulation of air and loss of elastic recoil in the lung tissues.

#use with parasite, especially roundworm frequencies

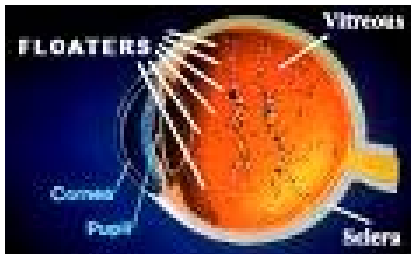

#Supplement with (KAL Brand) MSM to rebuild lungs 4,000 mg breakfast and 4,000mg at supper

Take MSM with meals / If you cannot find KAL Brand, add vitamin 500mg of Vitamin C to each dose. Also supplement CO-Q10 100 Mg

Eye Floaters

Folder: TRUERIFE FREQUENCIES Program: EYE FLOATERS Sessions. 3-6
Also try the Eye Floaters program from the TrueFocus folder (Run on the TrueFocus system only!)

Question: Have you had any results with eye floaters?

This is the program found on TrueRife systems under Eye Floaters:

2 hours

Some have wondered about frequencies for eye floaters. A pointer to an Italian web site referenced the following parasites:

- 1 - Dirofilaria spp. (a)
- 2 - Onchocerca volvulus (a)
- 3 - Toxocara canis (b)

The neat thing about eye floaters is that you can usually see them, particularly if you stare at a plain light colored wall. When you hit them with the right frequency they change from a sharp outline and disperse into a black mist and disappear.

Report from a Researcher: We were running a demonstration of a TrueFocus program this past week on one of our staff. Within 10 minutes the his floaters began to disintegrate! Why this program had this effect through the TrueFocus L.E.D. goggles is unknown. This program is experimental.

This program should be saved in the TrueFocus program and never run through the Rife bulb as it will overheat the system. This program will also reduce anxiety. It is to be used through the TrueFocus Brain Entrainment system only!
